SUBJECT : SECP3106 - APPLICATION DEVELOPMENT (WBL)

SEMESTER : 2 / 20252026

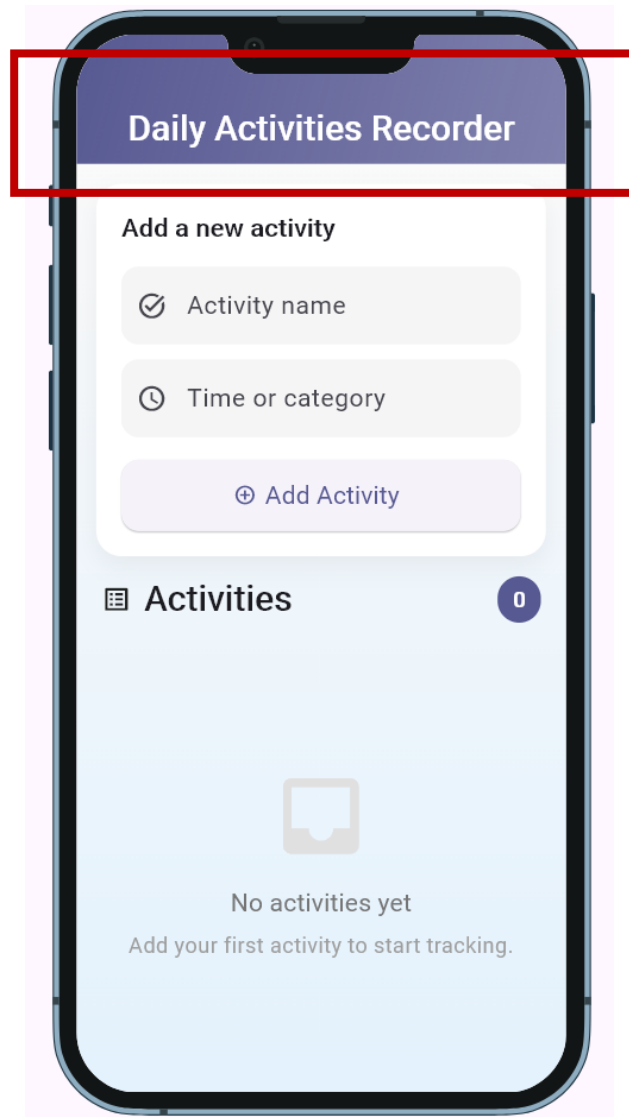

SECTION : 01

LAB ASSIGNMENT : 1

LECTURER : DR AHMAD NAJMI BIN AMERHAIDER NUAR

The interface of the Daily Activities Recorder App is designed to be simple, clean, and user-friendly. It allows users to easily input, save, view, and delete their daily activities. The main components of the interface are explained below.

1. AppBar (Application Title)

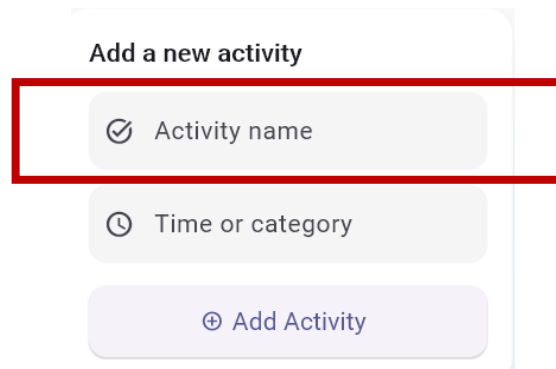

The AppBar is displayed at the top of the application screen with the title **“Daily Activities Recorder”**.

Function:

- Provides the name of the application
- Helps users understand the purpose of the app immediately

2. Activity Input Field

This input field allows users to enter the **name of the activity**, such as *Study*, *Jogging*, or *Breakfast*.

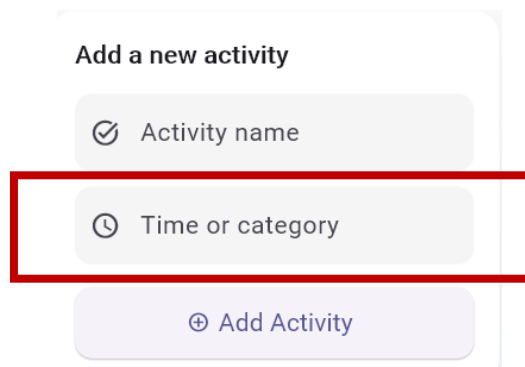

The screenshot shows a mobile app interface for adding a new activity. At the top, there is a title 'Add a new activity'. Below it, there are two input fields. The first field, labeled 'Activity name' with a checkmark icon, is highlighted with a red rectangular border. The second field, labeled 'Time or category' with a clock icon, is not highlighted. At the bottom of the form is a purple button with a plus icon and the text 'Add Activity'.

Function:

- Captures user input for the activity name
- Uses a TextField widget
- Includes hint text (e.g., “*Activity name...*”) for guidance

3. Time/Category Input Field

This field is used to enter additional details such as time or category (e.g., *8:00 PM* or *Exercise*).

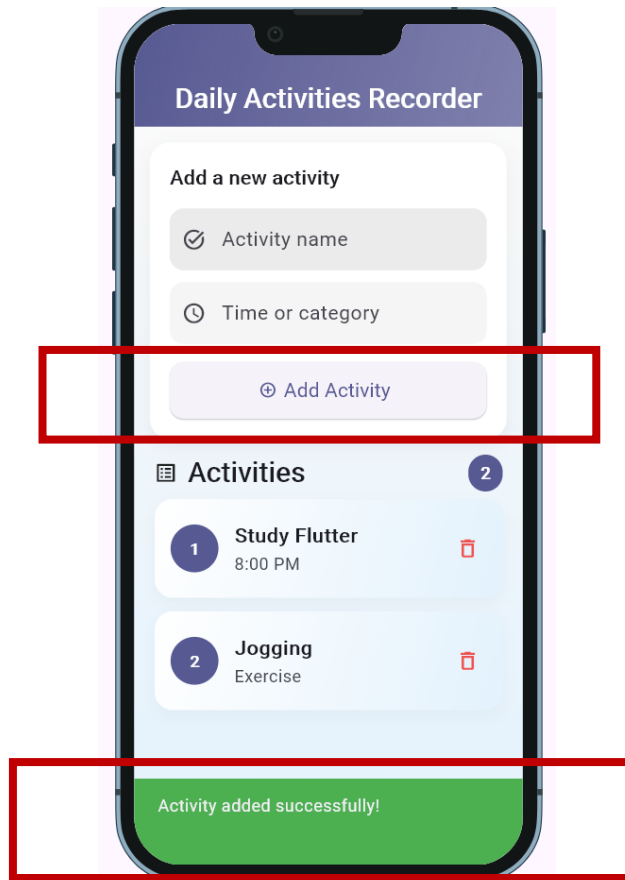

The screenshot shows the same mobile app interface as before. The title 'Add a new activity' is at the top. Below it, there are two input fields. The first field, labeled 'Activity name' with a checkmark icon, is not highlighted. The second field, labeled 'Time or category' with a clock icon, is highlighted with a red rectangular border. At the bottom of the form is a purple button with a plus icon and the text 'Add Activity'.

Function:

- Allows users to provide more information about the activity
- Also implemented using a TextField
- Improves clarity and organization of recorded activities

4. Add Activity Button

The Add Activity button is used to save the entered activity into the list.

Function:

- Triggered using `onPressed()`
- Calls `setState()` to update the UI
- Adds the activity to the list of activities
- Displays a popup message (SnackBar) to notify the user that the activity has been successfully added

This follows the flow:

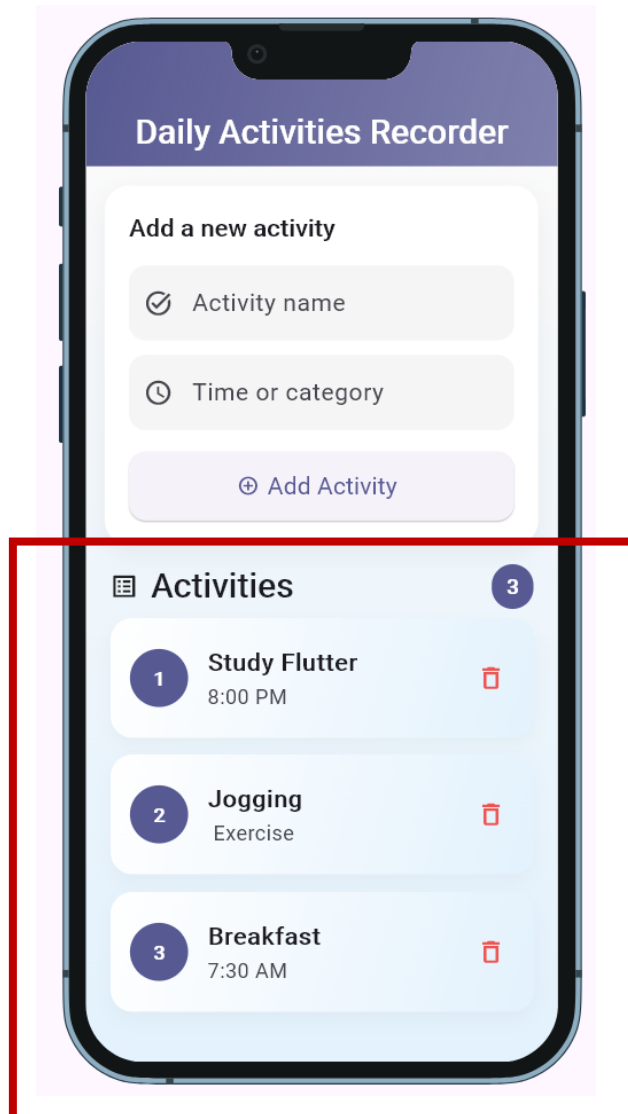

User input → Button click → `setState()` → UI update

Popup Feedback:

When the user clicks the Add button, a **SnackBar popup** appears at the bottom of the screen showing a message such as “**Activity added successfully.**” This improves user experience by providing immediate feedback after the action is performed

5. Activity List Display

The list displays all saved activities on the screen.

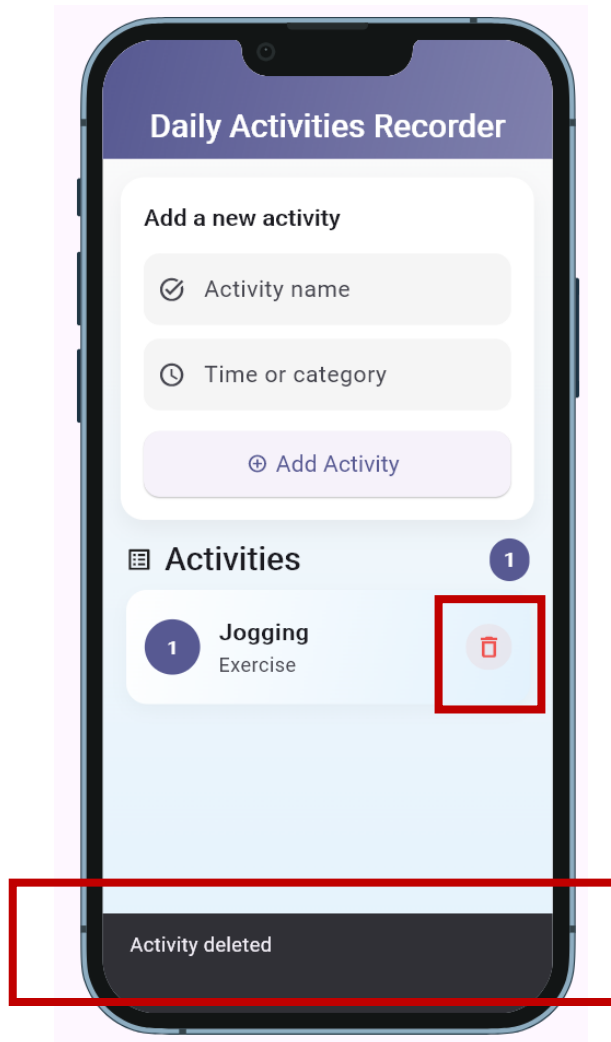

Function:

- Implemented using ListView
- Shows activity name and time/category
- Automatically updates when new activities are added

6. Delete Button

Each activity in the list includes a Delete button.

Function:

- Removes a selected activity from the list
- Uses `setState()` to refresh the UI
- Helps users manage and update their records easily
- Displays a popup message (SnackBar) to confirm deletion

Popup Feedback:

- When the Delete button is pressed, a **SnackBar popup** is shown with a message such as **“Activity deleted”**. This ensures the user is aware that the activity has been successfully removed
