Introduction

1.1 OVERVIEW

Farmers in Malaysia especially those live in Kemubu region frequently struggle to raise the money they need to start making money and make investments in new equipment or technology. Since many farmers particularly in developing nations who are lack access to credit or finance that is suitable to their specific needs [1]. However, the KADA system is outdated and finds it difficult to adapt to modern technologies. When it comes to handling registrations, it is ineffective since paper forms remain in use rather than a more efficient digital platform. Users become frustrated as a result of the procedure being slow and easy to make mistakes.

Our group, techMedico has decided to create an online registration system to replace the KADA manual registration system. Employees must manually complete a form in order to register as KADA cooperative members under the existing system. This outdated approach is challenging to use and leads to many mistakes and inefficiency. Employees are discouraged from enrolling due to the cumbersome process, as they may find it too complex or inconvenient. Apart from the problems with the registration procedure, the cooperative's existing membership ceiling of 500 members severely restricts the number of employees who are eligible to register. The workforce surpasses the membership cap, which prevents many prospective employees from joining and taking advantage of the cooperative's financial benefits. Before, manual registration wasn't thought of as issues, but as technology advanced, things changed.

In addition, our group determined that the proposed system would be a cross-platform, cloud-based solution that can be accessed via mobile and online apps. The system will automate the registration process, allowing employees to easily sign up as members of the KADA cooperative through an intuitive online form. Employees will no longer need to use paper-based forms to complete the e-registration form, they need to use e registration form to upload the necessary files, and submit their information for approval. After a user registers, the system will automatically monitor their membership status and eligibility for a number of financial incentives including retirement savings programs and loans. Members will also be able to apply for loans, examine and manage their financial contributions, and monitor their payment statuses in real time. By removing the 500-member cap, the system will ease membership growth and allow an unlimited number of employees to sign up.

There are many benefits to our proposed system. First of all, the system provides a fast, efficient, and user-friendly way to register and access the cooperative's financial services, including loans, savings plans, and retirement funds. Employees can sign up for memberships online by automating the registration process, which reduces the possibility of mistakes and eliminates the need for paper-based forms. The registration process will be easier to use and save time, especially for employees who may have previously found it challenging or cumbersome. Moreover, with the ideology of Industry 4.0, everyone can now access the internet and share or retrieve information online, making the registration process more accessible and in line with modern digital practices [2]. Additionally, the cloud-based platform of the system gives employees more transparency and control over their money by enabling them to apply for loans, manage their membership status, and keep an eye on their financial contributions in real-time. More employees will be able to join the cooperative and

take advantage of these financial resources since the maximum 500 member has been removed hence improving their overall financial stability.

Actually, nowadays they are some system or platform that has been created such as Koperasi Rakyat Malaysia (KRM) [3]. However, there are some differences between KRM existing system and our proposed system. For instance, the KRM system uses traditional membership management that member needs to fill form manually, which can be complicated and easy to make mistakes because it depends on human processes. On the other hand, our suggested system makes it easier to use and more accessible by automating the entire registration and membership management process and enabling online registration using a cloud-based, cross-platform solution. In addition, our proposed system provides real-time financial management and tracking, making it simple for employee to keep an eye on their contributions, savings, and loan status which the feature that KRM's platform not fully integrate.

1.2 The Existing System

AS-IS System

The current system employed by Lembaga Kemajuan Pertanian Kemubu (KADA) is a manual and semi-digital framework designed to facilitate key operations, such as membership registration, loan applications, saving account management, and agricultural program participation. The system is primarily manual, requiring users to rely on physical forms and direct interactions with KADA branches for most processes. The existing website (www.kada.gov.my) offers limited functionality, primarily serving as an information portal where users can download forms and learn about the cooperative's services. However, the lack of interactivity and automation hampers operational efficiency and user satisfaction.

System Type

The existing system is a **manual system**, requiring users to complete processes such as membership registration, loan applications, and program participation using physical forms and in-person submissions.

Current Functionality

Membership Registration

Users download forms from the website, fill them out manually, and submit them to the nearest KADA branch.

Loan Applications and Program Participation

- Users follow a similar process of manual form completion and physical submission.

Website

- Provides downloadable forms and basic information but lacks interactive or automated features.

Problems Faced by Users

Cumbersome Manual Registration Process

- workflows are entirely manual, resulting in significant delays and inefficiencies. Users are often required to visit KADA branches repeatedly to complete processes, consuming substantial time and effort. Furthermore, the reliance on manual forms increases the likelihood of errors, causing additional delays in processing applications and other requests. Language barriers also pose a significant issue. All forms and documentation are available exclusively in Malay, limiting access for users who are not proficient in the language. This restriction significantly hinders KADA's ability to attract a diverse member base, as potential members who do not speak Malay may find the system inaccessible and challenging to navigate.

Lack of Clear Instructions

- The website provides limited instructions, making it difficult for users to understand essential processes such as registering as a member, applying for a loan, checking the status of their registration or application, and participating in agricultural programs. Without clear, step-by-step guidance, users are often left confused, leading to incomplete applications and missed opportunities to benefit from KADA's offerings.

Membership Cap

- With a current cap of only 500 members, many potential users are unable to access KADA's services, such as loans and agricultural programs. This limitation not only restricts the cooperative's growth but also reduces its ability to support a larger segment of the agricultural community.

Lack of Financial Transparency and Reporting

Members are not provided with detailed financial reports, such as month-end or year-end profit and loss statements. This absence of transparency creates uncertainty and mistrust among members, as they have no means to assess the cooperative's financial health or understand how their contributions are being utilized.

The Proposed System

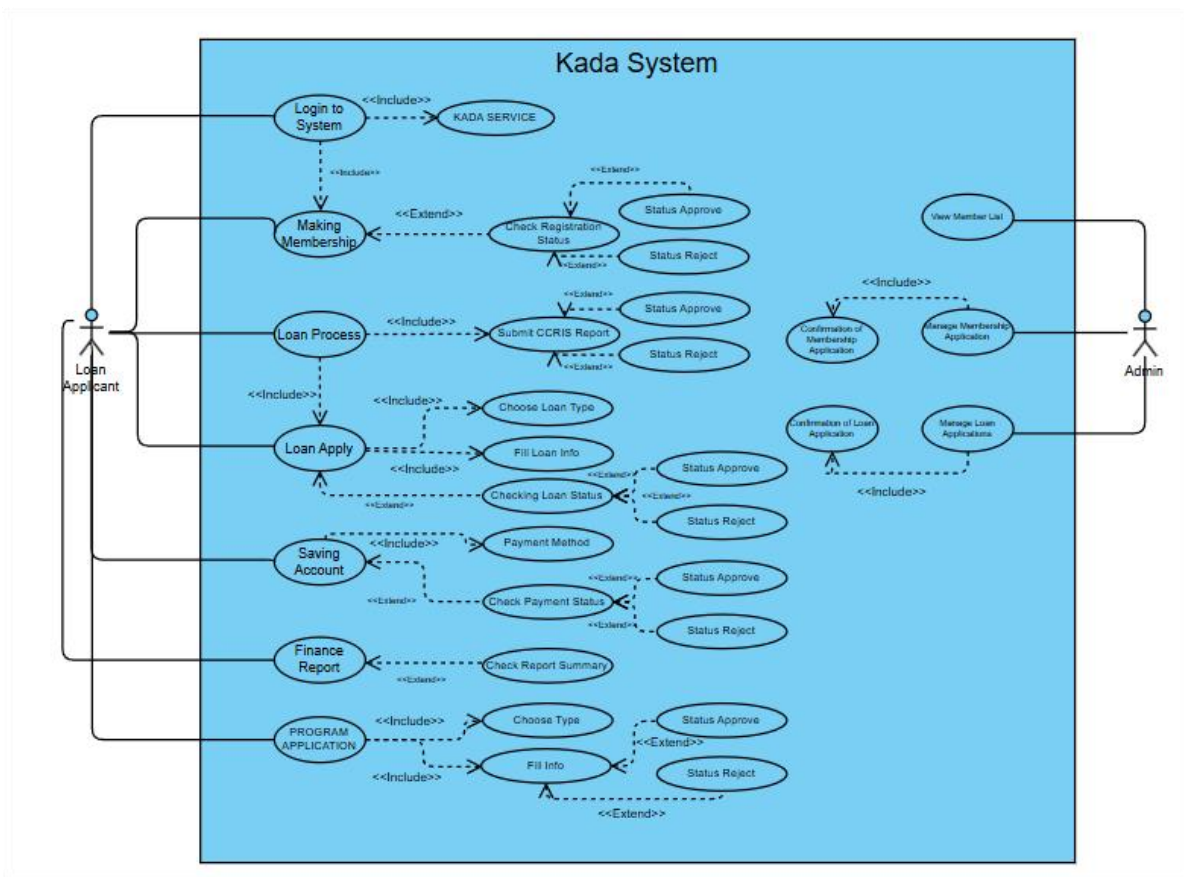

Figure 5: Use Case Diagram for KADA System

Our mission is to revolutionize the KADA cooperative registration system by replacing the outdated manual process with an efficient, cloud-based platform. This new system will simplify the registration process, making it faster, more user-friendly, and accessible across various devices. By eliminating the reliance on paper forms and introducing an automated digital workflow, we aim to reduce errors, save time, and provide users ,employees and staffs in the Kemubu region with a seamless way to join and benefit from the cooperative.

The main objectives of our proposed system are as follows:

- 1.To automate the registration process, enabling employees to sign up easily and efficiently through a cloud-based platform.
- 2.To eliminate the current membership ceiling, allowing an unlimited number of employees to join and benefit from the cooperative.
- 3.To provide real-time financial management features, including loan applications, savings plan, and payment monitoring.
- 4.To align the cooperative with Industry 4.0 principles, ensuring it remains competitive and relevant in a modern, digital economy.

Our ultimate goal is to support the economic and technological advancement of the agricultural sector by enhancing financial accessibility and transparency for cooperative members. This initiative will improve the overall financial stability of farmers and employees, contributing to the growth of the agricultural community in Malaysia while fostering inclusivity and innovation.

1. Apply Membership

- Implement an online membership application module that allow users to register as KADA cooperative members.
- Collect relevant documents and personal information from applications for verification during the registration process.
- Notify users with their registration status, whether approved or rejected with instructions for further actions.

Actor Involved: User, Admin

2. Apply Loan

- Enable members to apply for loans by selecting loan types and filling out required loan details.
- Allow members to track the status of their loan applications in real time.
- Notify applicants of approval or rejection and provide reasons and next steps for rejected applications.

Actor Involved: Member, Admin

3. Manage Saving Account

- Implement a savings account management feature to enable members to monitor and manage the payments related to loan, deposit and application.
- Allow members to select payment methods, track payment status and download receipt of successful transaction.
- Allow members to pay program application.
- Provide feedback on rejected or failed transactions and guidance for resolution.

Actor Involved: Member, Admin

4. Create Finance Report

- Develop a reporting module allowing members to generate summaries of their financial activities, such as loan balances and payment histories.
- Enable members to view and download detailed financial reports for personal tracking and transparency.
- Provide admins access to these reports for monitoring overall financial activities and ensuring compliance with organizational policies.

Actor Involved: Member, Admin

5. Approve Membership Registration

- Allow admins to review, confirm or reject membership applications submitted by users.
- Maintain a detailed list of all approved and pending members for future reference.
- Notify applicants of the approval status along with guidance for further actions if needed.

Actor Involved: Admin

6. Approve Loan Application

- Provide admins the ability to review loan applications and approve or reject them based on the required criteria.
- Ensure compliance with organizational policies during the loan approval process.
- Notify members of the loan application decision with appropriate reasoning or next steps.

Actor Involved: Admin

7. View Financial Status

- The system shall display a detailed financial summary for users, including:
 - Contributions to savings
 - Outstanding loan balances
 - Payment due dates
- The system shall ensure all financial data are accurate and updated in real-time with the latest data.

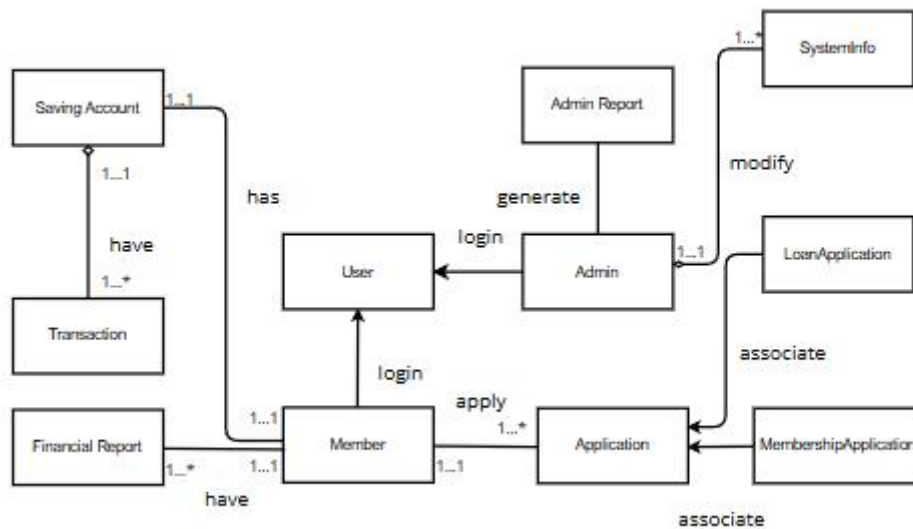

8. View Application List

- The system shall provide admins with a list of all membership, and loan, applications.
- The system shall allow admins to sort and filter application based on:
 - Application type
 - Application status
 - Submission date
- The system shall enable admins to view detailed information for each application.

9. Manage Website

- The system shall allow admins to generate detailed applications report, including:
 - Loan applications
 - Membership applications
- The system shall enable admin to download reports in standard formats like PDF .
- The system shall ensure all reports are accurate and updated in real-time with latest data.

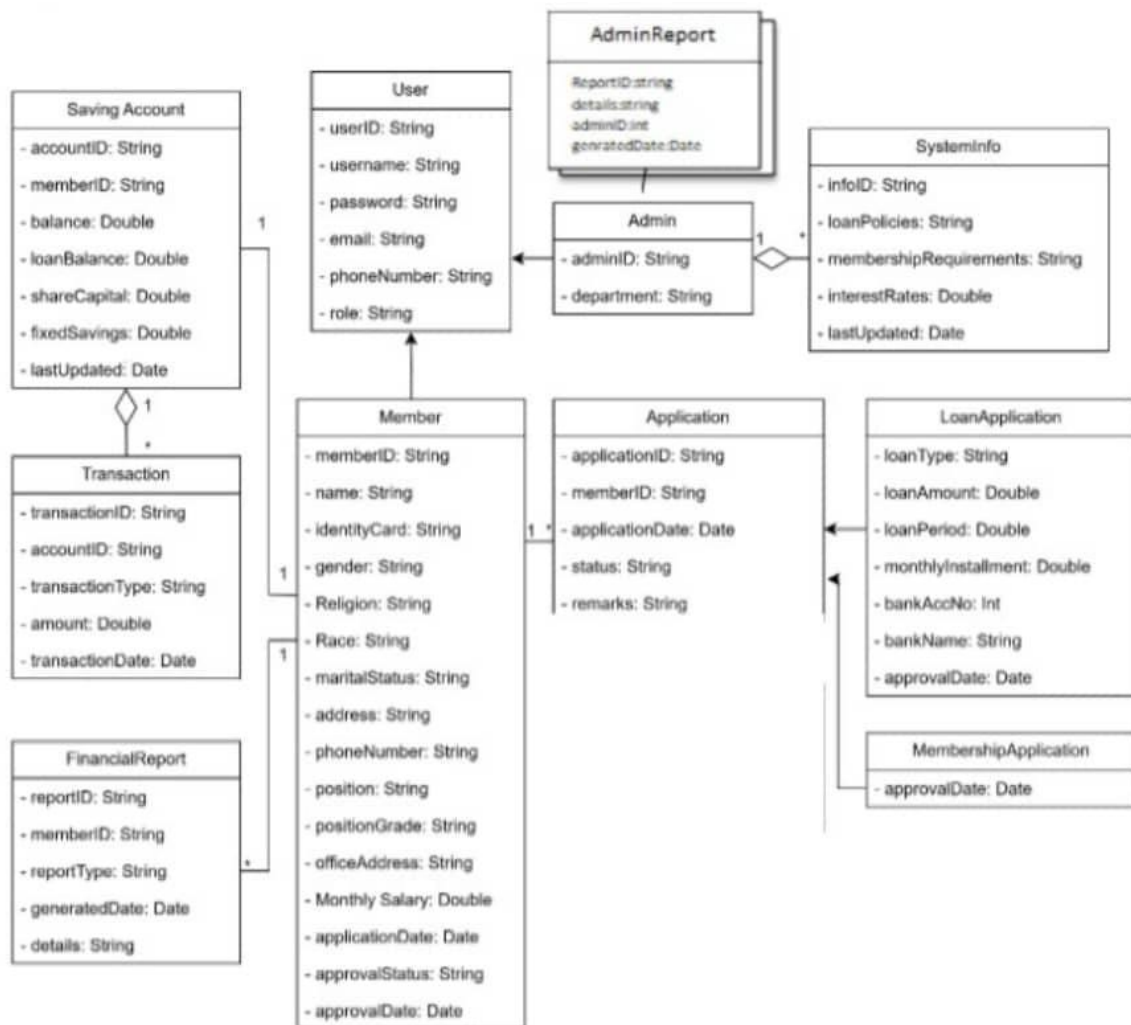

2.1 Global Conceptual Data Model (Global ERD)

2.2 Data Dictionary for the global conceptual ERD

Entity Name	Description	Aliases	Occurrence
User	Represents a user in the system, which could be an admin or a member.	Account Holder, User	Occurs when a user is created in the system.
Member	Represents an individual who has registered and been approved as a cooperative member.	Applicant, Member	Occurs when a user applies and is approved for membership.
Admin	Represents the administrator who manages applications, system info, and website content.	Admin, Manager	Occurs when an admin performs system operations.
Saving Account	Represents the savings account of a member, including balance, loan balance, share capital, and fixed savings.	Account, Savings	Occurs when a member opens or manages their savings account.
Transaction	Records transactions related to a member's saving account, such as deposits or payments for loans and programs.	Payment, Deposit	Occurs during savings account operations.
Financial Report	Represents monthly or annual financial reports generated based on saving account operations.	Report, Statement	Occurs when a member requests a financial report.
Application	Represents an application for membership, loans, or programs by a member.	Request, Form	Occurs when a member submits an application.
Membership Application	Represents an application for membership, including status and approval date.	Membership Request	Occurs when a user applies for membership.
Loan Application	Represents a loan application, including loan type, amount, period, and approval details.	Loan Request	Occurs when a member applies for a loan.
System Info	Represents system-level information, such as loan policies, membership requirements, and interest rates.	System Settings, System Info	Occurs when an admin updates or views system configurations.

3.1 Logical Database Design (Logical ERD)

3.2 Data Dictionary for the Logical ERD

1. Entity: < Member >

Attributes	Data Type & Length	Description	Null	Multi-valued	Example
memberID	int	Uniquely identifies the member	No	No	1
username	Varchar (50)	Username for member login	No	No	“Audrey”
password	Varchar (50)	Password for member login	No	No	“abcabc”
name	Varchar (100)	Full name of the member	No	No	“Audrey Sim”
IDNumber	Varchar (20)	Identification number	No	No	“A123456789”
gender	Varchar (10)	Gender of the member	No	No	“Female”
religion	Varchar (20)	Religion of the member	yes	No	“Christianity”
race	Varchar (20)	Race of the member	Yes	No	“Asian”
maritalStatus	Varchar (20)	Marital status of the member	Yes	No	“Single”
address	text	Address of the member	No	No	“123 Street Name”
phoneNumber	Varchar (15)	Phone number of the member	No	No	+60123456789
email	Varchar (50)	Email address of the member	No	No	“ abcabc@gmail.com ”
position	Varchar (50)	Job position of the member	No	No	“Manager”
positionGrade	Varchar (10)	Grad level of the position	Yes	No	“G7”
officeAddress	text	Office address of the member	No	No	“456 Office Street”
MonthlySalary	Decimal (10,2)	Monthly salary of the member	No	No	3500.50
applicationDate	date	Date of application	No	No	2025-01-03
approvalStatus	Varchar (20)	Approval status of the application	No	No	“Approved”

2. Entity: < Admin >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
adminID	int	Uniquely identifies the admin	No	No	1
username	Varchar (50)	Username for admin login	No	No	“admin01”
password	Varchar (50)	Password for admin login	No	No	“admin123”
name	Varchar (100)	Full name of the admin	No	No	“John Danny”
lastLogin	datetime	Last login time of the admin	Yes	No	2024-12-25 14:00:00

3. Entity: < Account >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
accountID	int	Uniquely identifies the account	No	No	101
memberID	int	Foreign key linking to Member entity	No	No	1
accountStatus	Varchar (20)	Status of the account	No	No	“Active”

4. Entity: < SavingAccount >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
balance	Decimal (10,2)	Current balance of the savings account	No	No	5000.00
shareCapital	Decimal (10,2)	Share capital amount	Yes	No	200.00
fixedSavings	Decimal (10,2)	Fixed savings amount	Yes	No	1000.00
interestRate	Decimal (5,2)	Interest rate for savings	Yes	No	2.50
withdrawalLimit	Decimal (5,2)	Maximum amount of withdrawal allowed	No	No	5000.00
lastUpdated	datetime	Last update timestamp for savings account	No	No	2024-12-25 12:00:00

5. Entity: < LoanAccount >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
loanBalance	Decimal (10,2)	Outstanding loan balance	No	No	10000.00
overdueAmount	Decimal (10,2)	Amount overdue on the loan	Yes	No	500.00
penaltyRate	Decimal (5,2)	Penalty rate for overdue payments	Yes	No	1.50
nextPaymentRate	date	Date of next loan payment	No	No	2025-02-02
lastUpdated	datetime	Last update timestamp for loan account	No	No	2024-12-12 12:00:00

6. Entity: < Transaction >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
transactionID	int	Uniquely identifies the transaction	No	No	1
accountID	int	Foreign key linking to Account entity	No	No	101
transactionType	Varchar (20)	Type of transaction (e.g., Deposit, Withdraw)	No	No	“Deposit”
amount	Decimal (10,2)	Transaction amount	No	No	1000.00
transactionDate	datetime	Date and time of the transaction	No	No	2024-12-12 10:00:00
transactionStatus	Varchar (20)	Status of the transaction (e.g., Completed)	No	No	“Completed”

7. Entity: < FinancialReport >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
reportID	int	Uniquely identifies the financial report	No	No	1
memberID	int	Foreign key linking to Member entity	No	No	1
reportType	Varchar (50)	Type of the financial report (e.g., Savings, Loan)	No	No	“Savings Report”
generatedDate	datetime	Date and time the report was generated	No	No	2024-12-25 15:00:00
details	text	Detailed description of the report	Yes	No	“Report content”

8. Entity: < Application >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
applicationID	int	Uniquely identifies the application	No	No	1
memberID	int	Foreign key linking to Member entity	No	No	1
applicationDate	date	Date the application was submitted	No	No	2024-12-12

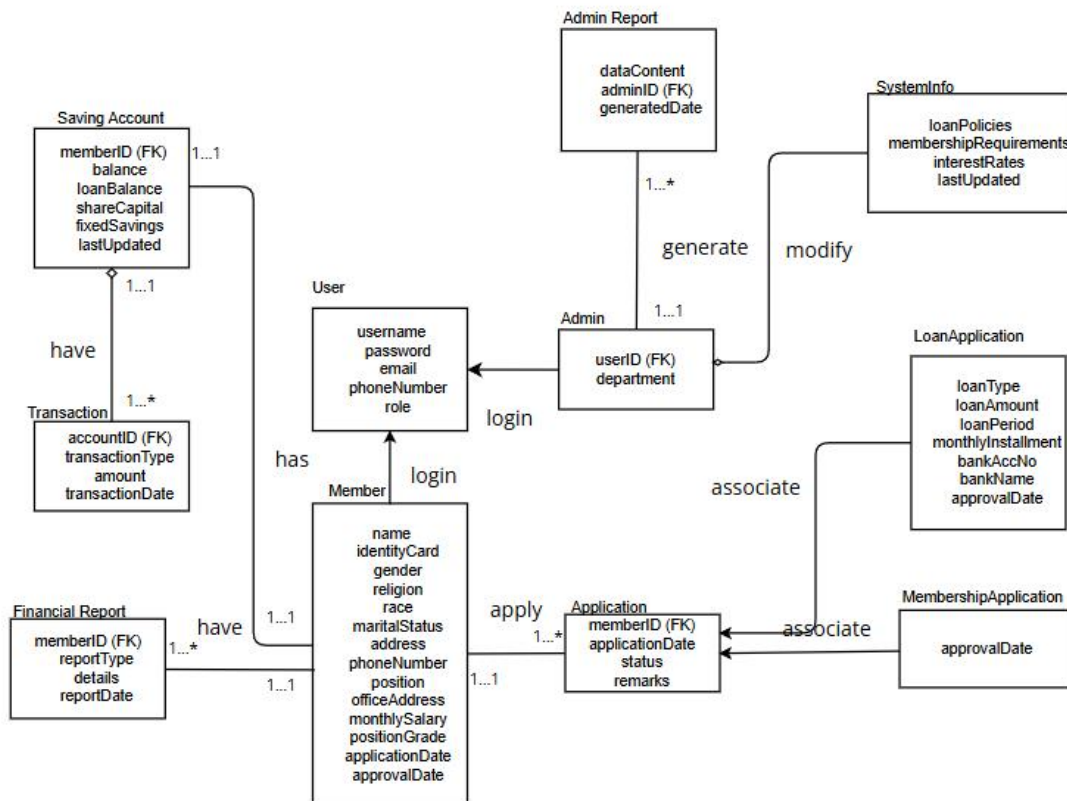

9. Entity: < LoanApplication >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
loanType	Varchar (50)	Type of loan applied	No	No	"Personal"
loanAmount	Decimal (10,2)	Amount of loan applied	No	No	40000.00
loanPeriod	int	Duration of the loan in months	No	No	60
monthlyInstallment	Decimal (10,2)	Monthly repayment amount	No	No	1000.00
bankAccNo	Varchar (30)	Bank account number for loan disbursement	No	No	"123456789"
bankName	Varchar (50)	Name of the bank	No	No	"Maybank"
approvalDate	date	Date the loan was approved	Yes	No	2024-12-31

10. Entity: < LoanStatus >

Attribute	Data Type & Length	Description	Null	Multi-valued	Example
statusID	int	Uniquely identifies the loan status	No	No	1
applicationID	int	Foreign key linking to Application entity	No	No	1
loanAccountID	int	Foreign key linking to LoanAccount entity	No	No	201
statusType	Varchar (50)	Type of the status	No	No	"Pending"
statusRemarks	text	Remarks or comments on the status	Yes	No	"Awaiting review"
statusTimestamp	datetime	Date and time of the status update	No	No	2025-01-01 16:00:00

3.3 Relational Database Schema(s)

3.4 Normalization

User

Column Name	Data Type	Constraints
id	INT	PRIMARY KEY, AUTO_INCREMENT
ic_no	VARCHAR(20)	UNIQUE, NOT NULL
password	VARCHAR(255)	NOT NULL
role	ENUM('admin', 'user')	NOT NULL, DEFAULT 'user'
created_at	DATETIME	DEFAULT CURRENT_TIMESTAMP
updated_at	DATETIME	DEFAULT CURRENT_TIMESTAMP ON UPDATE CURRENT_TIMESTAMP
email	VARCHAR(100)	UNIQUE, NOT NULL
verification_token	VARCHAR(255)	DEFAULT NULL
email_verified	TINYINT(1)	DEFAULT 0
reset_token	VARCHAR(255)	DEFAULT NULL
reset_token_expires	DATETIME	DEFAULT NULL

Example:

id	ic_no	password	role	created_at	updated_at	email	verification_token	email_verified	reset_token	reset_token_expires
54	0000000000000	\$2y\$10\$92IXUnpkjO0rOQ5byMl.Ye4oKoEa3Ro9lIC/og/at2...	admin	2025-01-24 03:51:13	2025-01-24 03:51:13	admin@kada.com	NULL	0	NULL	NULL

4.1.1 General

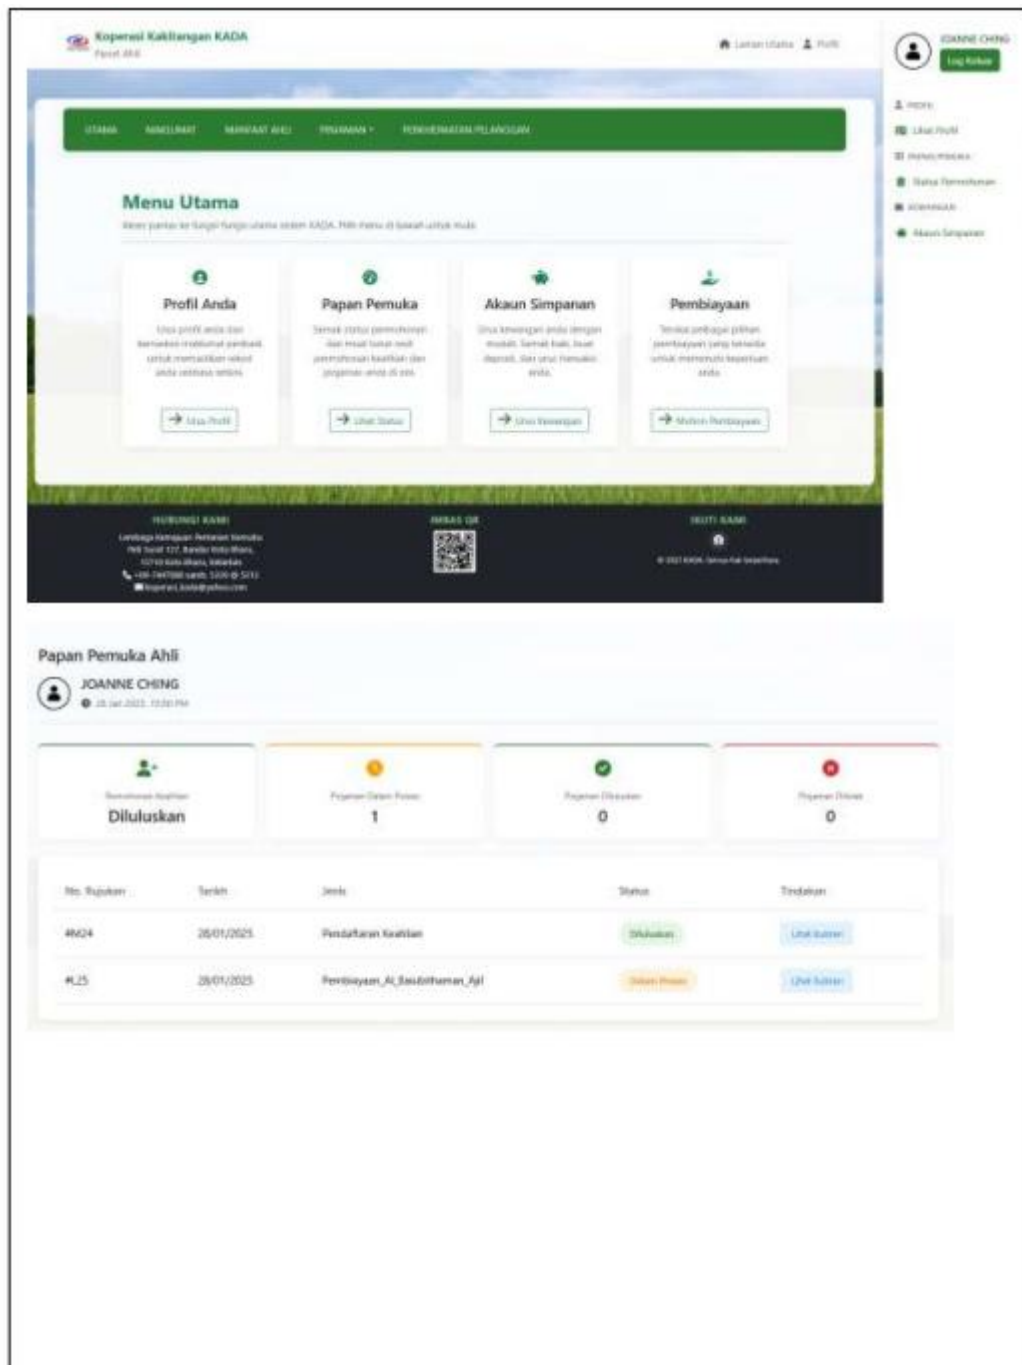

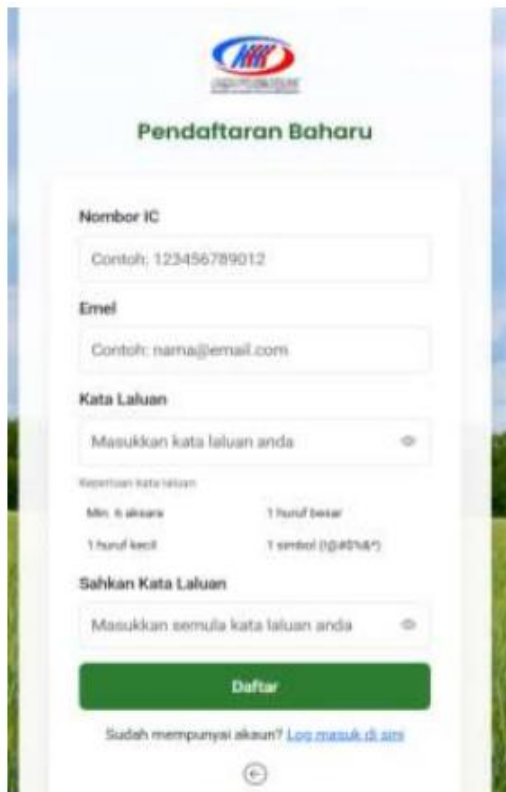

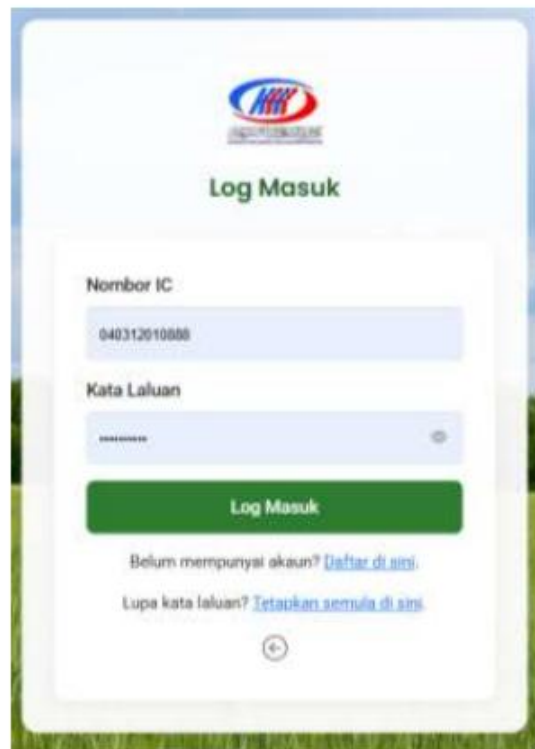

Figure 1: Interface for <Home Page>

4.1.2 User Authentication

The 'Pendaftaran Baharu' (New Registration) form includes fields for Nombor IC (with example 123456789012), Emel (with example nama@email.com), and Kata Laluan (password). The password requirements are: Minimum 6 characters, 1 uppercase letter, 1 lowercase letter, and 1 symbol. A 'Sahkan Kata Laluan' (Confirm Password) field is also present. A green 'Daftar' (Register) button is at the bottom, with a link to 'Log masuk di sini' (Log in here) for existing users.

New Registration

The 'Log Masuk' (Login) form includes fields for Nombor IC (with example 040312010000) and Kata Laluan (password). A green 'Log Masuk' button is at the bottom. Below the button are links for 'Daftar di sini' (Register here) for new users and 'Tetapkan semula di sini' (Reset here) for forgotten passwords.

Login

The email template is titled 'Status Permohonan Keahlian KADA'. It features a header with the KADA logo and the sender 'KADA System <eltjahshe04@gmail.com>'. The main body contains a greeting, a confirmation message 'Tahniah! Permohonan keahlian anda telah **DILULUSKAN**.', and a box titled 'Butiran Keahlian' (Membership Details) showing 'Nama: JOANNE CHING YIN XUAN' and 'No. Ahli: 1234545'. Below this, it lists the benefits of membership: accessing KADA facilities, applying for loans, making deposits, and enjoying KADA facilities. The email concludes with 'Selamat datang ke keluarga besar KADA!' (Welcome to the big KADA family!) and 'Yang benar, Pihak Pengurusan KADA' (Sincerely, KADA Management). At the bottom are 'Reply' and 'Forward' buttons.

4.1.3 Membership Application and Profile Management

Initial Profile

Membership Application form

The screenshot shows a web application interface. On the left is a sidebar menu with items like 'Dashboard', 'Manajemen Pengguna', 'Manajemen Dokumen', 'Manajemen Laporan', 'Statistik', 'Pengaturan', and 'Tentang Aplikasi'. The main content area displays the profile of 'Leo Yin Shari' with a yellow warning banner that reads: 'Terdapat dokumen yang menunggu untuk diproses oleh Anda. Untuk dapat melanjutkan proses ini, Anda perlu melakukan hal berikut: 1. Meninjau dokumen yang menunggu. 2. Mengetik dokumen yang menunggu.' Below the banner is a section titled 'Melakukan Perbaikan' with a table of pending documents.

No.	Nama Dokumen	Status
1	Dokumen 1	Pending

5.0 Summary

The **Online KKKK System** is a proposed digital platform designed to modernize the **Lembaga Kemajuan Pertanian Kemubu (KADA)** registration process, replacing the current outdated manual system. The existing system heavily relies on physical forms for membership registration, loan applications, and financial management. This manual approach results in inefficiencies, including slow processing times, frequent errors, and significant inconvenience for users. Moreover, the current system imposes a strict **membership cap of 500 members**, limiting employees' access to financial benefits and cooperative services. Additionally, the lack of financial transparency prevents members from effectively tracking their contributions, savings, and loan statuses, which in turn reduces trust in the system. The KADA website itself only serves as an informational portal, providing downloadable forms but lacking interactive or automated features, making it difficult for users to complete applications without visiting physical branches multiple times.

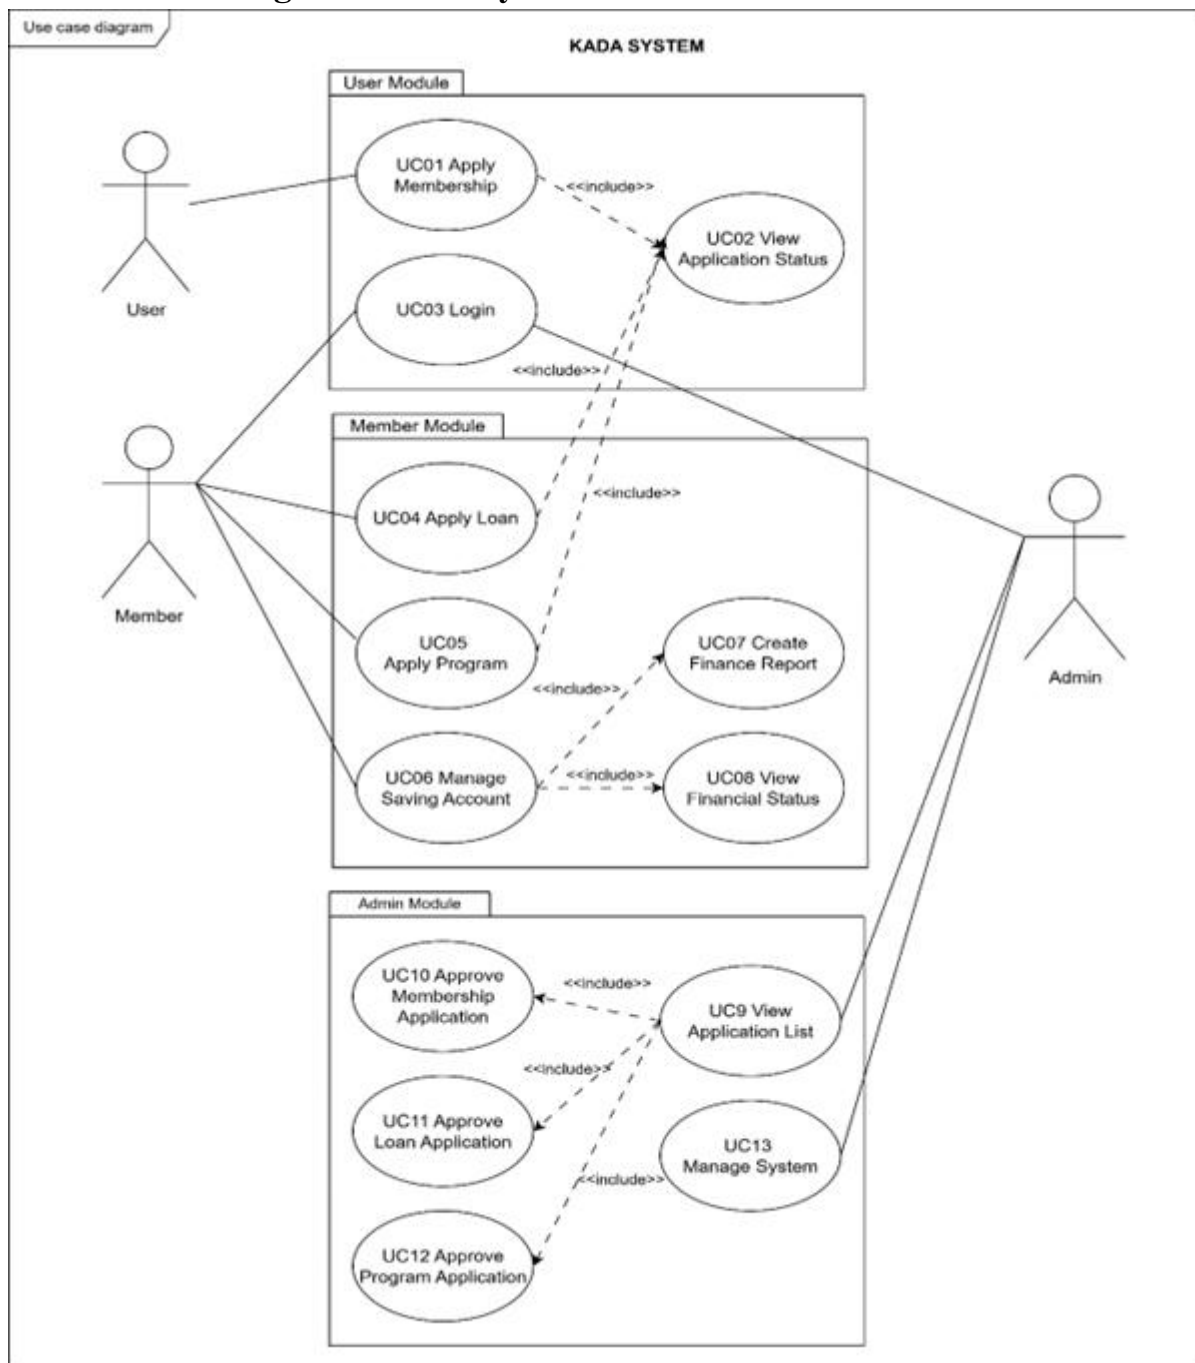

To address these issues, the **TechMedico** group proposes the development of a **cloud-based, cross-platform system** that will completely automate the registration process and introduce real-time financial management capabilities. The new system will allow employees to register as KADA cooperative members online, eliminating the need for cumbersome paper-based applications. In addition to simplifying membership registration, the system will enable members to **apply for loans digitally, track their application statuses, and monitor their financial transactions with ease**. A significant improvement over the current system is the removal of the **membership cap**, allowing an **unlimited** number of employees to join and benefit from KADA's financial services. The proposed platform will also introduce **real-time financial reporting**, allowing members to generate and download financial summaries such as loan balances, payment histories, and savings contributions. This feature enhances transparency and ensures that employees have complete visibility over their financial records.

The system will cater to two primary user groups: **general users (employees and cooperative members)** and **administrators**. Employees will have the ability to apply for **membership, loans, and savings accounts**, as well as **view real-time financial summaries and reports**. On the other hand, administrators will have **greater control**, including the ability to **approve or reject membership and loan applications, manage financial records, and generate official reports** to ensure compliance with organizational policies. Additionally, administrators will be responsible for **overseeing website functionality**, ensuring smooth operations and data integrity. The system will also provide **automated notifications**, informing users of their application statuses, upcoming payment deadlines, and necessary next steps for rejected applications.

In conclusion, the **Online KKKK System** aims to **revolutionize KADA's cooperative membership and financial management services** by significantly improving efficiency, accessibility, and transparency. By eliminating manual workflows and integrating modern digital solutions, the new system will reduce **processing times, minimize errors, and enhance user experience**. Furthermore, aligning the platform with **Industry 4.0** principles ensures that KADA remains competitive in today's digital economy, providing a **seamless, user-friendly, and scalable solution** for agricultural employees in Malaysia. Through this initiative, the agricultural sector will benefit from increased financial accessibility, improved cooperative participation, and overall economic growth.

Appendices

6.1 Use Case Diagram for the system.

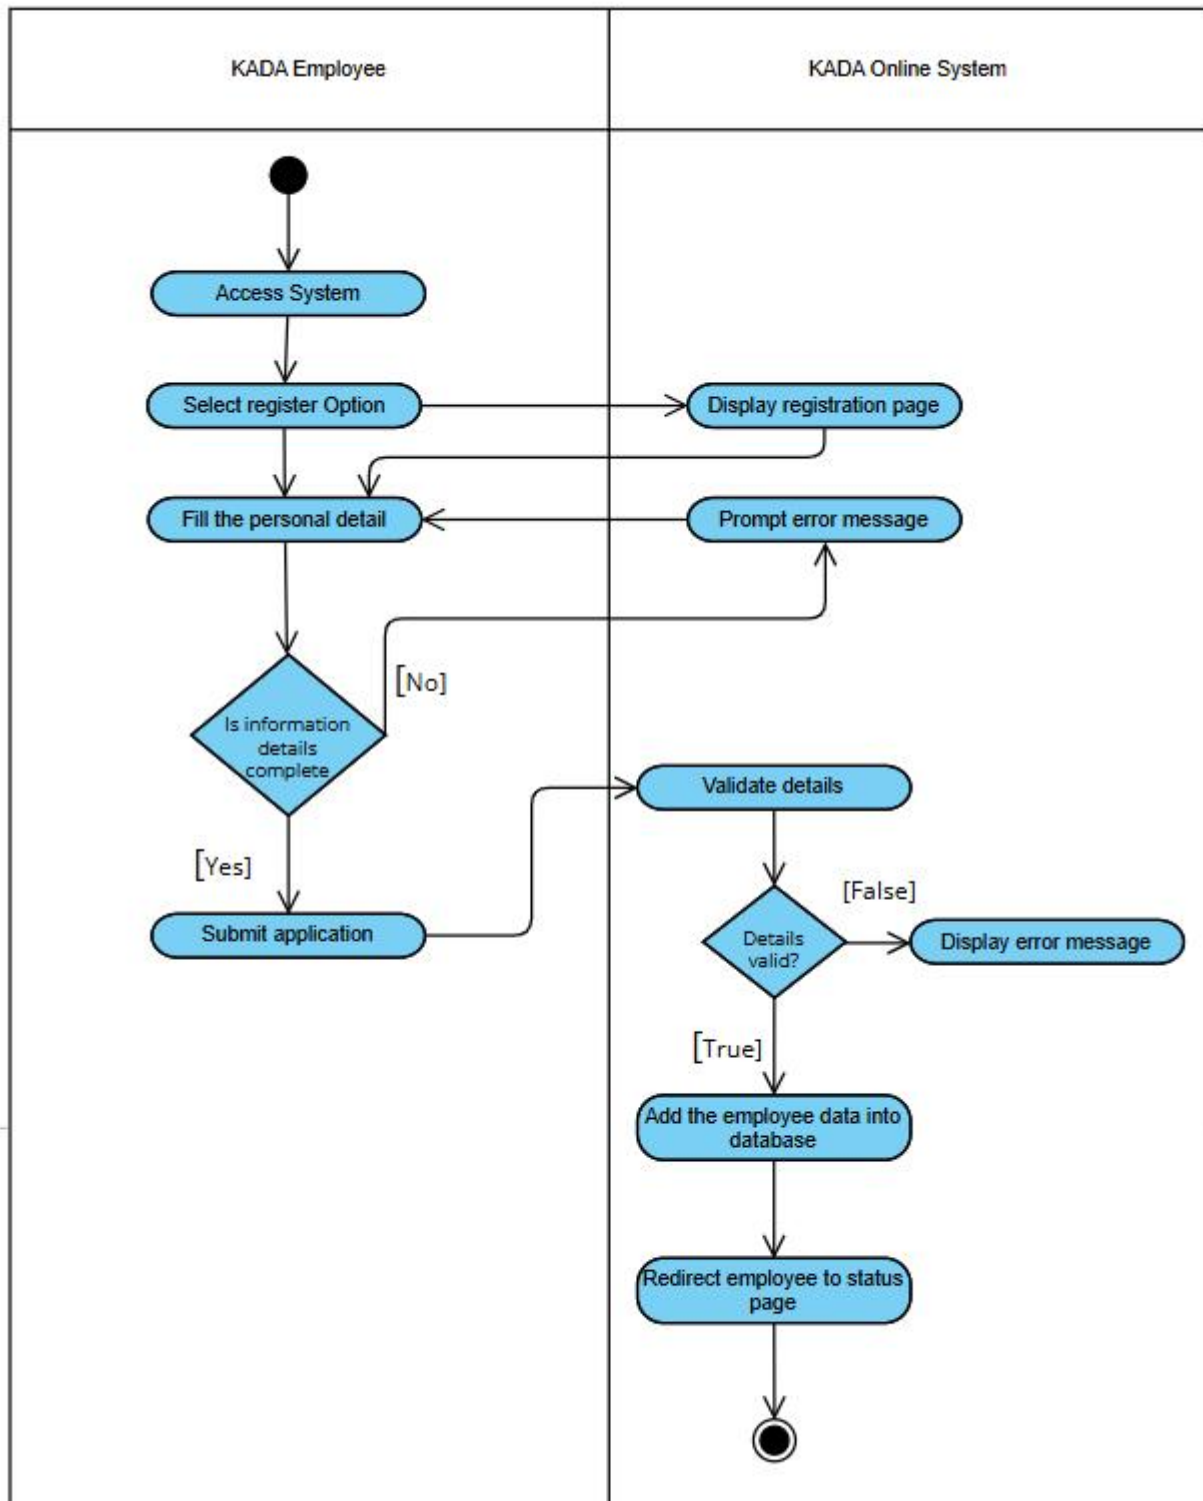

able 1.1: Description of Module and Functions for <Koperasi KADA System>

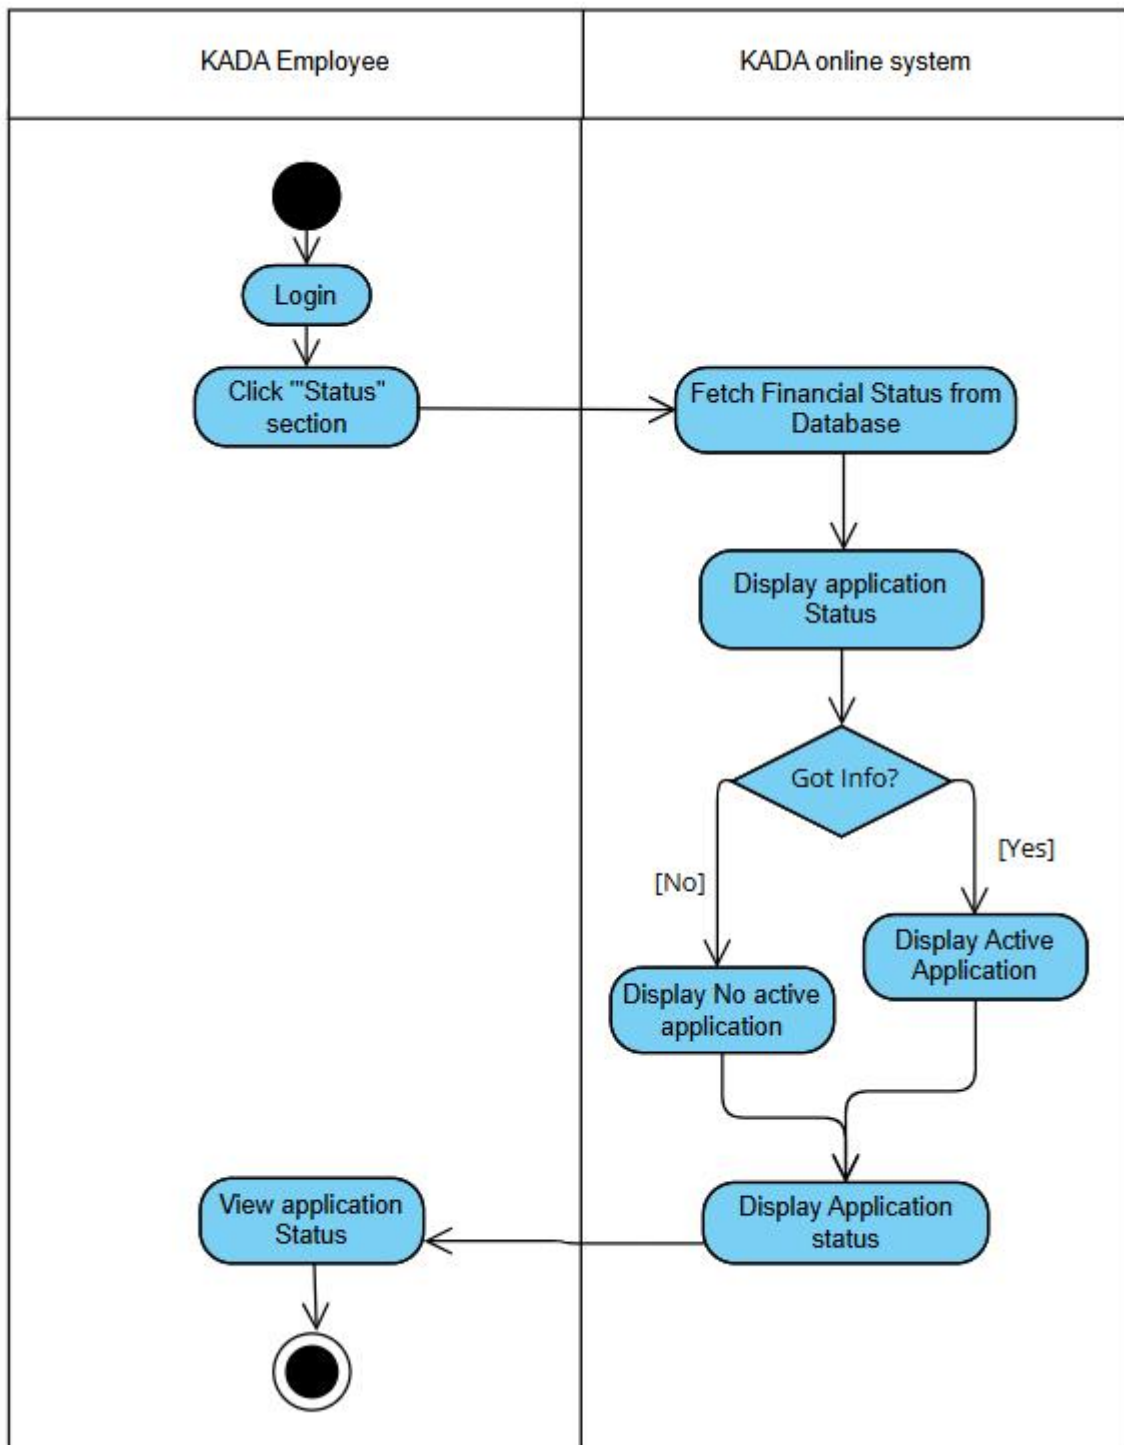

Use case	Function	Description
UC01	Apply Membership	A user can apply to be a member in KADA cooperative by filling in the online form and uploading the required documents.
UC02	View Application Status	If a user applies for membership, or a member apply for loan or program, they would be able to view their application status whether approved or rejected and further instructions.
UC03	Log In	The member and admin can login to the system by using the unique login username and password. Members will turn to the member page while admin will turn to admin page.
UC04	Apply Loan	The members can apply for loans by filling in the online form and uploading any required documents.
UC05	Manage Saving Account	The members can manage their saving accounts like depositing, paying for loans and program application and view account info.
UC06	Create Finance Report	Upon the management saving account operation, the members can create their monthly and annual finance report.
UC07	View Financial Status	Upon the saving account operation, the member can view their financial status, such as loan period, loan balance and loan amount.
UC08	Admin view Application List	The amin can view the list of membership and applications as well as the membership, and existing applications.
UC09	Approve Membership Application	The admin would be able to update the status of the membership application.
UC10	Approve Loan Application	The admin would be able to update the status of the loan application.
UC11	Admin view Report	The admin can view the report of the statistics of total membership applications and loan applications in a year.

6.3 Meeting Log

Meeting Log #1

Date/Time	16th January 2025 5:00pm		
Location	Online (Google Meet)		
Agenda	1. Understand the details about system		
	2. Discuss the materials prepared in advance		
	3. Determine possible materials to be included in the project of the company		
	4. Task distribution for all members		
Meeting Host	Elijah She Yu Sheng		
Attendance			
Name	Time	Reason For Absence	
Elijah She Yu Sheng	5:00pm	-	
Choh Jing Yi	5:00pm	-	
Lee Yin Shen	5:00pm	-	
Joanne Ching Yin Xuan	5:00pm	-	
Lim Yu Han	5:00pm	-	
Minutes			
No.	Item Discussed	Details	Person-In-Charge
1	Overview about the company	Introduction to the company, background, and business operations	Joanne Ching Yin Xuan
2	The Existing System	Explanation of the current system, its limitations, and challenges	Choh Jing Yi
3	The Proposed System	Description of the new system and its improvements over the existing system	Elijah She Yu Sheng
4	Global Conceptual Database Design (Conceptual ERD)	High-level conceptual ERD representing key entities and relationships	Lee Yin Shen
5	Data Dictionary for the Global Conceptual ERD	Detailed descriptions of attributes, data types, and constraints in the conceptual model	Lim Yu Han
6	Logical Database Design (Logical ERD)	Detailed ERD with normalization applied to ensure data integrity	Elijah She Yu Sheng
7	Data Dictionary for the Logical ERD	Explanation of the logical model’s attributes, keys, and relationships	Choh Jing Yi
8	Relational Database Schema(s)	Translation of the logical ERD into relational schemas with primary and foreign keys	Lee Yin Shen
9	Normalization	Step-by-step normalization process to ensure data efficiency and reduce redundancy	Lim Yu Han
10	Interface Design (Mapped to the Proposed SQL Statement)	Design of user interfaces linked to the database implementation	Joanne Ching Yin Xuan
11	SQL Statements (DDL & DML)	Implementation of database schema and data manipulation operations using SQL	Elijah She Yu Sheng
12	Summary	Recap of key findings and conclusions	Choh Jing Yi
13	Use Case Diagram for the system	Diagram representing system interactions with users	Lee Yin Shen
